PERSONAL PROJECTS

Club Reservations
- a web-based project that allows members in the basic, standard, and premium categories to reserve the Club's offers and events for immediate or upcoming amusement.

Electricity Management System
- The purpose of the electricity bill management system is to store customer bill records. Registered individuals, such as workers and customers, can only manage their own accounts while the admin has access to all of the accounts. This approach aids in keeping track of payments and invoices.

Departmemt Management System
- This project manages the list of learners registered for various sessions and their courses. Additionally, this system has the ability to add or delete students from a section.

UET Administrative ChatBot
- The UET Administrative Chatbot was able to offer freshly admitted students an autonomous helpdesk for admission counselling.

Arbibot
- Arbibot is a FAQ Bot about Arbisoft's Policy Guidlines, Office Location Search and Employee data record queries.
- Best Project Award in Arbisoft Interns 2022

Intelligent Energy Saving System
- This project guarantees that all electrical appliances will be automatically switched off when no one is home and on when someone is present by saving energy intelligently.
